Retaining independence and dignity greatly enhance one's quality of life. For all of us, privacy when using the toilet is of primary concern. Traditionally, lifting devices for toilets have only provided a practical solution, their design being purely functional, making them an unattractive and obtrusive addition to the bathroom. The Mountway Solo Toilet Lift is a new concept - slim line and battery-operated; it is both neat and discreet. Specially designed to raise and lower you on and off the toilet, it blends into its surroundings, causing no embarrassment to you or any member of your family.

Discreet

The Mountway Solo Toilet Lift is designed to play a key role in your home, without becoming the center of attention. Its compact, slim line appearance means it fits discreetly into your bathroom, taking up the minimum amount of space around your toilet.

Stylish & modern

Unlike other lifting devices for the toilet, the style and appearance of the toilet lift ensures that it will blend into any bathroom setting, whether the décor, furnishings and fittings are classical or ultra-modern.

Unique design

The toilet lift is robust and designed for long-term use. It is stable and sturdy, the contours smooth and rounded and the seat shaped for comfort.

Easy to use

Operating the Toilet Lift couldn't be easier. At a touch of a button or switch it will gently lower and raise you on and off the toilet. It has easily rechargeable batteries, presenting no electrical hazard in the bathroom.

Hygienic

Hygiene is an important consideration, particularly for the toilet. The design of the toilet lift with its smooth, contoured, easy to wipe surface makes routine cleaning simple.

Simple installation

The Mountway Solo Toilet Lift is simple to install. Often all that needs to be done is remove your toilet seat and adjust the height to suit. In some instances the feet may need to be fixed to the floor, this however, is straightforward.

Arms

The toilet lift is available with optional arms, these can be raised up to facilitate side transfer and create more space in the bathroom. An easy to operate switching system is built into one of the arms. Also incorporated within the switch arm is a battery status monitoring system, which indicates the charge level of your battery. Options of one arm or two arms with or without switching are available. (Please specify preference at time of order). If preferred, a handset can be used for operating the Solo if arm switching is not required.

Feet

The feet of the Toilet Lift have unique locking cups that are fitted with anti-slip pads for added security. If required, they can be permanently attached to the floor but still allow the Mountway Solo Toilet Lift to be removed for cleaning or servicing.

Batteries

A rechargeable battery operates the Mountway Solo Toilet Lift. There are no electrical installations in the bathroom. The removable battery is incorporated neatly into the frame eliminating the risk of trailing wires and cables. A standard toilet lift is supplied with two standard batteries so that the backup can always be on charge outside the bathroom. Larger capacity batteries are available for heavier institutional use. These batteries require a higher capacity charger.

Accessories

A range of grab rails and accessories are also available.
